Overview

Payroll Services Platform (PSP) is the server-side platform for the QBDT Payroll. PSP uses two databases for day to day operations. PSP has one of the largest monolith databases in Intuit with no shards. Monolith database size is ~27TB and growing at 3TB/year. Audit database size is 5.5TB in size and growing at 0.5 TB/year.

- **Monolith database** stores real-time transaction data for DT payroll and is one of the largest in the company with no shards.
- **Audit database** primarily contains audit data.

Change management

To ensure proper management of production changes, it is necessary to follow the approved CR process. It is highly recommended to schedule these changes outside of regular business hours, and during weekends if possible. If a change is deemed critical, downtime may be required, which should be planned in advance in close coordination with the development team. Effective communication is vital in ensuring smooth execution of these changes.

Incident management
