

PSP Yearly password change for Security Compliance

Context

As part of Intuit's SOX and internal security policy compliance requirements, all non-human account passwords (i.e. System/Service Accounts) identified on SOX in-scope systems must be refreshed at least once a year. This is a mandatory compliance requirement except where extreme technical constraints and unknowns prevent the password from being reset.

Steps

How to complete your review in QuickBase:

1. Login to QuickBase url and look for System and Accounts assigned to your name.
2. Change the password for the mentioned account in your system and take a screenshot of the password changed as audit evidence. For bulk edit use the Grid Edit option under drop-down menu within the 'List All Accounts' section
3. In QuickBase, click Edit and select the Risk Mitigation method "Password Changed" and upload the corresponding screenshot as evidence, i.e. PTIME log, password change confirmation message, etc
4. If there is a reason for not changing the password, please select other options from the Risk Mitigation method and upload corresponding evidence
5. For Password Change Extension or Do Not Change request, we need approval from the Director level or above with business justifications.

Data to collect to upload in QB for each user record

- Coordinate with each stake holder (for eg. downstream users) to get password changed.
- Make sure you capture date of connection made and database name and password change evidence as shown in below example. Either keep session/window open to capture date/time OR get it from oracle metadata.

```
SQL*Plus: Release 12.1.0.2.0 Production on Wed May 20 08:25:00 2020

Connected to:
Oracle Database 12c Enterprise Edition Release 12.1.0.2.0 - 64bit Production
With the Partitioning, OLAP, Advanced Analytics and Real Application Testing options

SQL> sho parameter db_name

NAME                                TYPE        VALUE
-----
db_name                             string      PSPPP001
SQL> alter user PSPBOADMIN identified by [REDACTED] account unlock;

User altered.
```

- Upload screenshot as above for each user, for which password is getting changed and select appropriate option from dropdown ("password changed").

Detailed steps for PSP application

Test password change in non-prod env to understand risk and issues. Below were final steps for Prod after testing in non-prod.

	steps	status	owner	remarks
1	Take Backup of Old credentials via script		Sandeep	
2	Enable turn away page		Shiplu	
3	Ensure all existing connections goes away. All services should have 0 PODs running		Praveen /Vishwa	

4	change password in PSP database (monolith + IBOB) in US-WEST-2 and US-EAST-2 region		Mayank	users : PSPADM, PSPAPP, PSPREAD_AWS, IBOB_PROD_PSPAPP, IBOB_PROD_PSPREAD, IBOB_PSPREAD_AWS, IBOBADM With this, we also had to change few other users as mentioned below (in Green)
5	Store IBOBADM in IDPS		Ram	
6	manual SQL connectivity verification		Mayank	
7	sync IDPS with new password via scripts - PSP + RJF (4 keys need to be updated)		Sandeep	
8	Deployment - PSP		Shiplu	
9	Deployment of PubSub		Ram	
10	Restart - RJF, PAPI, Query Console, Payroll DM		Ankush /Praveen	
11	During deployment ensure existing db connections are gone and starts making new connections.		Mayank	
12	PSP Sanity		Shiplu	
13	PubSub Sanity		Ram	
14	RJF, PAPI, Query Console, Payroll DM		Ankush /Vishwa	
15	Disable turn away page		Shiplu	

Rollback: Sync IDPS with old password taken as backup before change step #1 above

Monolith (us-west-2 & us-east-2) :

```
alter user GGS identified by "xxxx" account unlock;
alter user GGT identified by "xxxx" account unlock;
alter user MON_OPS identified by "xxxx" account unlock;
alter user OIMUSER identified by "xxxx" account unlock;
alter user OPS_USER identified by "xxxx" account unlock;
alter user SBG_VDBA identified by "xxxx" account unlock;
alter user SBG_WAVEFRONT identified by "xxxx" account unlock;

aws --profile sbg-psp-prod --region us-west-2 rds modify-db-instance --db-instance-identifier psppp001 --master-user-password xxxxxx
aws --profile sbg-psp-prod --region us-west-2 rds modify-db-instance --db-instance-identifier pspppib1 --master-user-password xxxxxx
```

IBOB (us-west-2 & us-east-2) :

```
alter user GGT identified by "xxxx" account unlock;
alter user INTU_IQUATE identified by "xxxx" account unlock;
alter user RDS_WAVEFRONT identified by "xxxx" account unlock;
alter user OPS_USER identified by "xxxx" account unlock;
alter user SBG_WAVEFRONT identified by "xxxx" account unlock;

aws --profile sbg-psp-prod --region us-east-2 rds modify-db-instance --db-instance-identifier pspsp001 --master-user-password xxxxxx
aws --profile sbg-psp-prod --region us-west-2 rds modify-db-instance --db-instance-identifier pspspib1 --master-user-password xxxxxx
```
